Postgres SQL

Professional Experience

Full Stack Web Developer
Coder Foundry
Mar 2023 – present | Remote
- Built 3 Full Stack Apps with ASP.NET Core MVC with use of Postgres DB using Bootstrap, C#, JavaScript and HTML
- Built several Front-End apps with Vanilla JavaScript
- Worked with CI/CD with GitHub
- Published sites to Railway and Netlify
- Worked quickly and efficiently to meet weekly deadlines

Team Lead
iScriptServices
Sep 2021 – Mar 2023 | Remote
- Led a team of medical scribes in accurately and efficiently documenting patient encounters
- Ensured compliance with medical documentation standards, including HIPAA regulations
- Trained new team members on medical terminology, EMR systems, and documentation procedures
- Collaborated closely with physicians and other healthcare professionals to optimize workflow and documentation accuracy

Account Manager
iScribeHealth
Oct 2019 – Sep 2021 | Remote
- Direct point of contact for 20+ orthopedic surgeons from over 7 different clinics across the United States. Communicating with clients to ensure that all of their needs are understood and addressed.
- Oversee a virtual team of 35+ individuals including scribe managers, quality assurance specialists, and scribes.
- Maintain 90% retention and continue to grow book of business, building strong client relationships to maintain old business and acquire new customers through existing contracts.

Projects

Tracker Boss
A full stack, role-based bug tracker using .NET MVC.
In addition to CRUD operations, Tracker Boss allows users to assign priority levels to each project as well as priority and development stages to all created tickets within each project. Tickets and projects are never deleted from the Postgres database, but rather archived and can be restored at any time if in Admin or Project Manager roles.

TechTalks Junction
A full stack blog website using Postgres SQL.
Created a blog web application where CRUD operations are accessed only by Admins. Moderators can be assigned as well with specific CRUD limitations. However, any user can sign up and leave comments on any blog. Blogs can be searched throughout the site or filtered by associated tags or their category.
